

Empowering Interagency Partner Collaboration Using GIS

Project Title	Empowering Interagency Partner Collaboration Using GIS
Project Summary	Develop a GIS to locate appropriate agency boundaries and relevant contacts for resource protection
Country	United States

Project Description

Upper Delaware Scenic and Recreational River is a 73-mile-long partnership region in two states, five counties, and multiple regions of multiple federal and state agencies. Coordination of development projects and natural/cultural resources depends on contacting the appropriate representatives of many agencies...often quickly...to coordinate response or review of resource-impacting issues.

Development of a GIS to identify the boundaries of these agencies, with their contact information, among other valuable information (e.g., types of projects and review handled by that region) will enable staff to locate the site of an issue and quickly locate the corresponding responsible agency contact.

Required Skills or Interests

Skill(s)

Data analysis

GIS expertise

Research

Additional Information

You will be on the "ground floor" of a newly-organized planning unit, working with 2-3 staffmembers to complete a sorely needed guide to help protect the river's natural and cultural resources.

Language Requirements

None
